

ADVOGRAFT

ADVOGRAFT ONE

Single-layer amniotic allograft for advanced wound care

AdvoGraft One is a dehydrated, single-layer amniotic membrane allograft derived from human placental tissue. Designed for use in both acute and chronic wound settings, AdvoGraft One offers a sterile, immune-privileged matrix rich in native extracellular proteins and growth factors. It supports wound healing by promoting epithelialization and reducing inflammation, without requiring cryopreservation or reconstitution.

- ✓ Supports re-epithelialization
- ✓ Modulates chronic inflammation
- ✓ Sterile, shelf-stable (15–30°C); no refrigeration or rehydration required

ADVOGRAFT MEMBRANE DUAL

Dual-layer amniotic/chorionic allograft for complex wounds

AdvoGraft Membrane Dual is a dehydrated, dual-layer placental allograft engineered to provide structural integrity and robust biologic activity for the treatment of deep or complex wounds. The graft combines amniotic and chorionic membranes to enhance scaffold durability and optimize cell signaling for tissue regeneration. Packaged sterile and ambient stable, it offers clinical convenience across care settings.

- ✓ Versatile for acute and complex wounds
- ✓ Dual-layer matrix: amnion and chorion
- ✓ Preserves ECM architecture and cytokines

HCPCS Code: Q4380

Key Benefits & Clinical Applications

- Single-layer graft derived from the amniotic membrane
- Supports re-epithelialization and modulates chronic inflammation
- Sterile, shelf-stable (15–30°C); no refrigeration or rehydration required
- E-beam sterilized to SAL 10^{-6}
- Ready to use for in-office, hospital, or ASC application

- ✓ Diabetic foot ulcers
- ✓ Venous leg ulcers
- ✓ Pressure injuries
- ✓ Post-surgical wound dehiscence
- ✓ Traumatic skin loss or dermal defects

Key Benefits & Clinical Applications

- Dual-layer matrix: amnion and chorion
- Provides enhanced strength for structurally challenging wounds
- Preserves ECM architecture and cytokines essential to healing
- No thawing or reconstitution needed
- Electron-beam sterilized; shelf-stable at ambient temperatures

- ✓ Full-thickness ulcers and exposed wound beds
- ✓ Dehiscent surgical sites
- ✓ Orthopedic or podiatric wound management
- ✓ Complex trauma wounds requiring biologic support
