

ADVOGRAFT™

ADVOGRAFT ONE

ADVOGRAFT MEMBRANE DUAL

Single-layer amniotic allograft for advanced wound care

Dual-layer amniotic/chorionic allograft for complex wounds

AdvoGraft One™ is a dehydrated, single-layer amniotic membrane allograft derived from human placental tissue. Available for use in both acute and chronic wound settings, AdvoGraft One offers a sterile biologic, with optimal barrier protection and easy handling. The retained extracellular matrix acts as a barrier and may augment the migration and adhesion of native cells.

AdvoGraft Membrane Dual™ is a dehydrated, dual-layer placental allograft and biological covering that can be used to provide structural integrity for deep or complex wounds. The graft combines amniotic and chorionic membranes to enhance coverage. Packaged sterile and ambient stable, it offers clinical convenience across care settings.

- ✓ Supports re-epithelialization
- ✓ Modulates chronic inflammation
- ✓ Sterile, shelf-stable (15–30°C); no refrigeration or rehydration required

- ✓ Versatile for acute and complex wounds
- ✓ Dual-layer matrix: amnion and chorion
- ✓ Preserves ECM architecture and cytokines

HCPCS Code: **Q4380**

Key benefits & clinical applications

- Single-layer graft derived from the amniotic membrane
- Supports re-epithelialization and modulates chronic inflammation
- Sterile, shelf-stable (15–30°C); no refrigeration or rehydration required
- E-beam sterilized to SAL 10⁻⁶

- ✓ Diabetic foot ulcers
- ✓ Venous leg ulcers
- ✓ Pressure injuries
- ✓ Post-surgical wound dehiscence
- ✓ Traumatic skin loss or dermal defects

Key benefits & clinical applications

- Dual-layer matrix: amnion and chorion
- Provides enhanced strength for structurally challenging wounds
- Preserves ECM architecture and cytokines essential to healing
- No thawing or reconstitution needed

- ✓ Full-thickness ulcers and exposed wound beds
- ✓ Dehisced surgical sites
- ✓ Orthopedic or podiatric wound management
- ✓ Complex trauma wounds requiring biologic support

HCPCS Code: **Q4382**
