ADVOGRAFT™  
ONE

Single-layer amniotic allograft for advanced wound care

AdvoGraft One™ is a dehydrated, single-layer amniotic membrane allograft derived from human placental tissue. Designed for use in both acute and chronic wound settings, AdvoGraft One offers a sterile, immune-privileged matrix rich in native extracellular proteins and growth factors. It supports wound care management by promoting epithelialization and reducing inflammation, without requiring cryopreservation or reconstitution.

- ✓ Supports re-epithelialization
- ✓ Modulates chronic inflammation
- ✓ Sterile, shelf-stable (15–30°C); no refrigeration or rehydration required
- ✓ Versatile for acute and complex wounds
- ✓ Preserves ECM architecture and cytokines
- ✓ **Q code 4380**

# ADVOGRAFT ONE

HCPCS code: Q 4380

## Key benefits & clinical applications

- Single-layer graft derived from the amniotic membrane
- Supports re-epithelialization and modulates chronic inflammation
- Sterile, shelf-stable (15–30°C); no refrigeration or rehydration required
- E-beam sterilized to SAL 10<sup>-6</sup>
- Ready to use for in-office, hospital, or ASC application

✓ Diabetic foot ulcers

✓ Venous leg ulcers

✓ Pressure injuries

✓ Post-surgical wound dehiscence

✓ Traumatic skin loss

✓ Dermal defects
