

XCELL AMNIO MATRIX

Advanced amniotic membrane
for wound care

Xcell Amnio Matrix™ (XAM) is a next-generation lyophilized amniotic membrane allograft developed to protect wounds across a broad range of acute and chronic conditions. As part of New Horizon Medical Solutions' advanced wound care portfolio, XAM™ combines clinically relevant cell retention, barrier protection, and handling simplicity — making it a go-to option for modern wound care practices.

- ✓ Lyophilized amniotic membrane
- ✓ Opaque and thicker graft structure
- ✓ LYOTEK proprietary processing
- ✓ Ambient-temperature storage
- ✓ Versatile for acute and chronic wounds
- ✓ Available in multiple sizes

Advanced wound care made simple

Xcell Amnio Matrix™ (XAM) is different from other skin substitutes. This dry, flexible graft does not require rehydration and features easy handling. What you can't see is the benefit of our proprietary processing focused on preserving the quality of the matrix. The preserved extracellular matrix with an outer basement membrane immediately serves as a natural barrier.

- **Natural barrier:** Protects from the environment.
- **Simple to apply:** Flexible graft with no rehydration needed.

Next generation allograft that offers easy-to-use wound care solutions

Optimal preservation of the extracellular matrix.

Chronic wounds — Physicians use Xcell Amnio Matrix to protect wounds from the surrounding environment during treatment of chronic diabetic foot ulcers, venous leg ulcers and pressure wounds.

Surgical — Xcell Amnio Matrix serves as a natural barrier and allows surgeons to create an environment for the remodeling of surgical and reconstructive wounds.
